

How Cells Perform Amazing Functions and Evolve to Overcome Challenging Environments

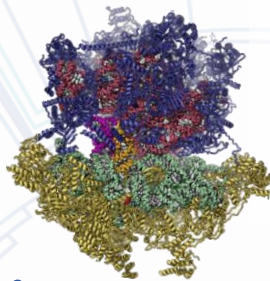

Instructor: Idan Frumkin (frumkini@mit.edu) | Lab of Prof. Michael Laub

First class on February 17 at 10AM | Day and class time are flexible

How can cells optimize gene expression?

How do core cellular machineries adapt to changing environments?

How does complexity increase in evolution?

Are all cellular phenotypes functional?

How do new genes and functions emerge?
